Romania and Greece both ran 54% renewable. One paid €19/MWh more.

Average day-ahead price and renewable share of generation on heatwave days, May–September 2026. Along the Hungary–Romania–Bulgaria–Greece corridor · four markets wired to each other · the spread is €19/MWh, while renewable share swings between 30% and 54%.

Correlation between renewable share and price across the ten: r = +0.03. A heatwave day is 3+ consecutive days above the local day-of-year 90th percentile of daily maximum temperature, or at or above 30 ·C; each country is measured against its own non-heatwave days in the same May–September season, weekdays matched to weekdays. Price is the unweighted daily mean of day-ahead prices. Source: ENTSO-E Transparency Platform; ERA5 via Open-Meteo.
